END TO END
ENTERPRISE SOLUTIONS

End to End's Origin & Grounding

End to End was founded on April 16th, 2012 by Esteve Mede; Carlton joined End to End in 2016, four years after its genesis and together they recently transitioned the company into its new phase. End to End Enterprise Solutions is currently celebrating its **ten-year anniversary.** The principles of End to End Enterprise Solutions boast a combined total of 14 military service years and 45 years in the tech industry. This valuable resource of experience is what they put to the test every day, with success. It is worthy of note that both men now serve and work to protect the types of organizations where they honed their skills and received many accolades for their dedicated and insightful analysis and incisive decision-making. They have, in fact, 'walked the walk' in the public service and are perfectly poised to make a difference in that same arena.

CEO & Founder Esteve Mede

is a former Federal Chief Information Security Officer, (CISO) with over 20 years of delivering results to both private and public sectors. Esteve's broad Technology, Cybersecurity, Operations, and business background has been spread across diverse organizations. He was a Patent Examiner at USPTO in the area of Information Security and Cryptography. He served at the Department of Commerce as an Information Technology Security Officer, before leading the IT Shop for the Postal Regulatory Commission. Adept at leading cross-functional and multinational teams, he is also highly skilled at merging disparate technologies and personnel into team-centered business units, leading to more efficient and creative solutions. Esteve is an expert at creating technology roadmaps, managing finances, and delivering new functionalities quickly and effectively. This talented team builder has a knack for developing long-range visions and translating them into reality.

CTO & Co-founder Carlton Harris

complements Esteve's skills and has over 15 years of experience in the information security and cybersecurity fields, supporting a vast number of government agencies such as the US Navy, National Security Agency, US Army Intelligence Command, and Department of State. Carlton is proficient in SOC implementation, Incident Response, and Cloud Security Architecture and Design. Currently, he directly oversees company growth and the establishment of products and services to support R&D, AI\ML, Engineering and Cybersecurity. Carlton directly leads architecture teams to implement enterprise solutions to support emerging technology use cases, including Blockchain, AI\ML, and Secure DevOps implementations. His achievements include successfully obtaining FedRAMP for their SaaS-based Continuous Monitoring and Secure DevOps platform, Singularity.
